DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 4-6, 8, 12-15, and 17-22 are rejected under 35 U.S.C. 102(b) as being anticipated by WIPO 02/25137 (using US Patent Application 2004/0245056 to Baumann et al. as an English equivalent).

Re: claims 1, 8, 12, 13, 14, 15, 18, 19, and 22. Baumann et al. show in figure 1 a self-energizing brake assembly comprising: a support 48 pivotally mounted at an angle relative to a rotatable member 14, and a brake pad 40 movable along the support between engaged and disengaged positions with the rotatable brake member to generate a braking force between the brake pad and the rotatable brake member.

Re: claim 4. Baumann et al. show in figure 1 the assembly comprising an adjustable member 54,56 biasing the support toward the rotatable brake member.

Re: claim 5. Baumann et al. show in figure 1 the limitation wherein the adjusting member comprises a compliant member. As broadly recited, member 54,56 is "ready or disposed to comply or submissive" (as defined by Webster's Collegiate Dictionary 10th Edition) to the operator of the device.

Re: claims 6 and 21. Baumann et al. show in figure 1 the limitation wherein the adjustable member comprises a linear actuator since the output of elements 54,56 can result in the linear motion of components connected accordingly.

Re: claim 17. Baumann et al. show in figure 1 the assembly comprising biasing the brake pad toward engagement with the rotatable member with an adjustable member 46 and moving the adjustable member in proportion to the self energizing gain in braking force.

Allowable Subject Matter

3. Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Baumann et al. fail to show the limitation of the brake pad comprising a wedge or piece of substance that tapers to a thin edge and for being driven into the space between the support and the rotating member as shown in figure 1 of the instant invention. Baumann et al. also do not show the friction element being pivotally mounted to a wedge.

Response to Arguments

4. Applicant's arguments, see pg. 1-2, filed 5/26/06, with respect to the rejection(s) of claim(s) 1-6, 8, 12-15, and 17-22 under 35 USC 102 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Baumann et al.

Response to Amendment

5. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.
